## FEATURES

### 30 Ghosts of the Universe

Tiny subatomic particles traveling through you right now might just hold the answers to some of our biggest mysteries, including why anything exists at all.

BY DOLLY SETTON

### 38 To the Edge and Back

The black hole at the galaxy's center is about to put on a show — and a new telescope as big as our planet will give us front row seats.

BY STEVE NADIS

### 44 COVER STORY Face of Hope

Robert Hale traded his comfortable plastic surgery practice for the Army. What he saw in dusty field hospitals is inspiring him to rewrite the book on facial reconstruction.

BY LIZA GROSS

### 54 Nothing But a Hack

MIT's maverick inventor Jose Gomez-Marquez wants to revolutionize medical equipment, one dollar-store DIY project at a time.

BY JONATHON KEATS

**EVENT HORIZON**  
Sagittarius A\*, the black hole in the middle of our galaxy, is poised to devour G2, a cloud of gas and dust that's nearing its edge, shown in this illustration.

p. 38

**ON THE COVER**  
New surgical tech means new hope for veterans with traumatic facial injuries. Photo illustration by Richard Roberts.

## COLUMNS & DEPARTMENTS

**9 THE CRUX** Getting a gut feeling about microbes' role in evolution, asteroids on a path to self-destruction, buying time for dying reefs and their endangered residents, the elemental truth of creating matter, serious research on tickling yourself (it's no laughing matter!) and more.

### **16 MIND OVER MATTER** **An Invisible Enemy**

Once dismissed as a symptom of stress or, worse, the imagination, Gulf War illness is showing itself at last through structural changes in the brain. But can it be cured?

BY FLORENCE WILLIAMS

### **20 VITAL SIGNS** **Star Power**

The athletic son of a hospital nurse checks in to the ER with mysterious chest pains, but the VIP treatment his mother demands could prove fatal.

BY TONY DAJER

### **23 BONUS SECTION** **Medical Mysteries**

If you like Vital Signs, you'll love this free preview of our new *Discover* special.

### **60 NOTES FROM EARTH** **Forever Young**

From 5,000-year-old bristlecone pines to the humble but hardy moss champion plant, why do some organisms never suffer the slow decline of old age?

BY HILLARY ROSNER

p. 9

p. 14

p. 16

p. 60

## EXCHANGE

### **5 Editor's Letter**

When readers tell us what's vital about the magazine, we listen.

### **6 Inbox**

On your minds: space germs, Jane Goodall and Google's new wheels.

p. 68

**65 HOT SCIENCE** The vaccination debate gets an injection of moderation, NASA's Curiosity rover prepares for its next act, a new exhibit highlights the math of natural beauty and the natural beauty of math, and more. Plus: Urban Skygazer and a September calendar that will have you howling at the moon.

### **74 20 THINGS YOU DIDN'T KNOW ABOUT ... Cats**

Finicky demigods or sinister overlords that rule the Internet through viral memes? Guess again. Cats are highly evolved hunters that have left their mark in some surprising places.

BY GEMMA TARLACH
