FEATURES

26 All in His Head

Albert Einstein's genius theories changed the rulebook of physics, and it was all thanks to his creative thinking. **BY ANDY BERGER**

32 Amateur Power

Citizen astrophotographers use their talent and gear — plus some unconventional techniques — to produce brilliant images. Even NASA would be jealous.

EDITED BY ERNIE MASTROIANNI

40 The Revolution Will Be Edited

In the San Francisco Bay Area, the gene-editing technique Crispr-Cas9 is sparking rivalries, reshuffling careers and empowering DIY users. **BY JEFF WHEELWRIGHT**

50 The Psychopath and the Hare

Coming face-to-face with coldhearted criminals set prison psychologist Robert Hare on a path to becoming a leading expert on one of humans' most disturbing disorders. **BY DANIELLE EGAN**

COLUMNS & DEPARTMENTS

6 EDITOR'S NOTE

It Starts With a Pause

Take a breath and consider your favorite case of scientists thinking outside the box.

7 THE CRUX

See inside Japan's new gravitational wave detector site, learn about spacecraft that outlived their missions and still gave us extra findings, and get the scoop on some summer science reads.

18 BIG IDEA

The Fall and Rise of String Theory

Once the darling of physicists, string theory has lost some of its luster. But that doesn't mean researchers have abandoned it. **BY STEVE NADIS**

22 VITAL SIGNS

Bad Chemistry

A woman struggling to kick her addiction lands in the ER with nausea, vomiting and cramps. Is the obvious answer the right one?

BY TONY DAJER

56 HISTORY LESSONS

The Marine Menagerie

The rediscovery of an exquisite set of glass sea creatures, initially a happy find for researchers, reveals cause for concern. **BY JONATHON KEATS**

60 OUT THERE

Riding on a Beam of Light

To get to the outskirts of our solar system — and beyond — the power of light might be our best bet.

BY STEVE NADIS

64 ORIGIN STORY

When Neanderthals Replaced Us

In the Evolutionary Olympics, *Homo sapiens* took the gold. Yet finds in Israeli caves suggest, at one point, Neanderthals had us beat.

BY THEODORA SUTCLIFFE

68 NOTES FROM EARTH

Into Thin Ice

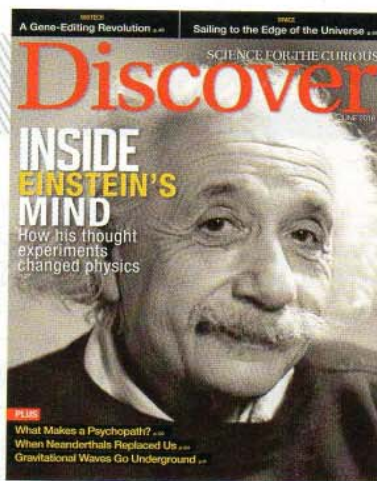

As glaciers melt, the tiny ecosystems they host could vanish too, just as scientists start to understand them.

BY ELIZABETH PRESTON

74 20 THINGS YOU DIDN'T KNOW ABOUT ...

Bug Bites

They're itchy, bumpy and sometimes lethal. And most of the critters gifting you with those lovely bites aren't even technically bugs. **BY GEMMA TARLACH**
