Contents

JUNE 2018

VOL. 39, NO. 5

Ancient permafrost is thawing in northern latitudes, including along Alaska's Arctic coast. Read about the dangers on page 36.

FEATURES

28 Long in the Tooth

Teeth are storytellers, time-stamping when we're exposed to toxins. Now, researchers are drilling down to connect specific substances to disease.

BY RACHEL CERNANSKY

36 Something Stirs

Earth's permafrost is thawing, exposing prehistoric seeds, animal carcasses and maybe something more sinister: ancient infectious pathogens against which we have no defense. BY BRIDGET ALEX

46 Whatever Happened to the Future?

Though time machines and warp-speed travel aren't the norm, other tech still promises a Jetsons-esque future. BY BILL ANDREWS

56 Beyond Time

A physicist tries to grasp the enigmatic landscape of a timeless world.

BY CARLO ROVELLI

Contents

COLUMNS & DEPARTMENTS

6 EDITOR'S NOTE

Into the Future

Some far-out high-tech promises actually feel within reach today.

7 INBOX

Readers weigh in on the quantum rabbit hole that is human consciousness and on the velocity of space junk.

9 THE CRUX

Sulfur might be the Hail Mary to beat global warming; how the chemtrail conspiracy lives on; a Lower Mississippi River model could hold clues to stemming bayou erosion; revisiting the potential of a memory boost in a pill; and more.

22 VITAL SIGNS

Helping Hands

Doctors race to save a middle-aged man who collapses on a commuter train and has no signs of life.

BY TONY DAJER

26 MIND OVER MATTER

The Power of Three

Two's company, but three can be too, at least when it comes to keeping everyone honest. BY MARINA KRAKOVSKY

62 PROGNOSIS

In the Blood

A test of bodily fluids may one day detect residual disease in cancer patients.

BY DELIA O'HARA

Sand flea

64 ORIGIN STORY

Was Science Wrong About Being Right?

Researchers try to get a grip on our right-handed preference, but uncover more questions than answers. BY GEMMA TARLACH

70 OUT THERE

As the Mighty Quasars Flow

Could the universe's most mysterious signals emanate from billions of sources? Two Harvard astronomers think so. BY STEVE NADIS

74 20 THINGS YOU DIDN'T KNOW ABOUT ...

Sand

Learn why it's highly sought, out of this world and a builder of countries. BY SYLVIA MORROW

Background signals that have puzzled scientists for decades could be coming from black holes. Read about the theory on page 70.
