## FEATURES

### 28 What It Takes to Reach 100

Live long and prosper, as the Vulcan salute goes. Some people have managed that first part much better than others, and the key could be in their DNA.

BY LINDA MARSA

### 36 Your Attention, Please

MIT neuroscientist Earl Miller has made a name for himself with his research on working memory, the brain's scratchpad. His next goal? To make us all smarter.

BY ADAM PIORE

### 42 Drilling to Doomsday

Beneath the Gulf of Mexico lies evidence of one of Earth's most cataclysmic events. Now, experts are getting their closest look yet. BY ERIC BETZ

### 50 Weapons of Math Destruction

Sure, credit scores are important, but they hold more sway than you'd think. And in many cases, that can be a very bad thing. BY CATHY O'NEIL

## ON THE COVER

- To Planet 9 ... and Beyond! p.70
- Crowdsourcing Cancer Research p.24
- Science of Aging p.28
- The Power of One Brain p.18
- Drilling to Doomsday p.42
- Science Behind Your Credit Score p.50

## COLUMNS & DEPARTMENTS

### 6 EDITOR'S NOTE

#### Chasing Longevity

Living to 100 takes a stroke of genetic luck and a dose of resilience.

### 7 THE CRUX

How experts plan to give the Ignorosphere some love, an update on surgeon Anthony Atala's work on 3-D bioprinting, we add to our blog family and more!

### 18 PROGNOSIS

#### A Mind in Time

Researchers are spending some quality one-on-one time with patients' brains. The results could steer the course for future clinical treatment. BY ADAM HADHAZY

### 22 MIND OVER MATTER

#### Think Outside the Brain

Feeling guilty? Take a page from

Lady Macbeth's book and try washing your hands. It works, and neuroscience backs it up. BY MALLORY LOCKLEAR

### 24 BIG IDEA

#### Fighting Cancer With Data

Cracking the human genome means doctors can now personalize cancer treatments. But not without teamwork and a whole lot of computing power.

BY AIMEE SWARTZ

### 70 OUT THERE

#### To Planet 9 — and Beyond!

Past the celestial body formerly known as a planet, i.e., Pluto, astronomers are continuing their hunt for the elusive Planet 9. BY COREYS POWELL

### 74 NOTES FROM EARTH

#### The Judas Fish

In Montana, the invasive lake trout is choking native fish populations. With a secret weapon, ecologists are finally turning the tide. BY JANINE LATUS

### 78 HISTORY LESSONS

#### A Profile of Plague

The deadly pestilence of old is still around, and scientists are learning about its past and future. BY HILLARY WATERMAN

### 82 20 THINGS YOU DIDN'T KNOW ABOUT ... BATS

Forget your stereotypes, there's more to these winged mammals of the dark than vampire lore. BY GEMMA TARLACH

## 57 OUT THERE SPECIAL BONUS SECTION

Crucial tips for your 2017 eclipse planning, the amateur astronomer who beat NASA to the punch with his observations of Saturn, and how one legendary meteorite hunter has turned his eyes from the ground to the skies.
